

Math in Basketball

Ask your child these questions next time you are watching a basketball game! Work through the questions together as a family.

- What fraction of the total points did your favorite player score?
- If the total points scored were divided equally between the four quarters, how many points would that be per quarter?
- Count how many times the shot clock restarts this quarter.
- Estimate how many fans are in the audience. How did you make that guess?
- Add, subtract, multiply, or divide the jersey numbers of your favorite players, players on the team, or all the players on the court.
