

## Weekend Math

It may be a break from school, but math is everywhere!  
Try asking these questions to start a math conversation this weekend.

How many pieces total are in our pizza? How can we divide the pieces evenly between the number of people we need to feed?

How many hours did we spend driving in the car/riding the bus/walking this weekend? How does this compare to the number of hours that we do these things during the week? Do we spend more hours doing these things during the week, or the weekend?

Budget with your 3rd grader for things that you might spend money on for the holidays. That can be holiday meals, presents, decorations, christmas lights...get creative! Can your 3rd grader help you budget?

**Create your own conversation starter! Write it here, take a photo, and send it back to Imagine Learning via Remind.**
